

## Circulation History Settings

It is possible to turn off loan/hold history via **tab100** for individual libraries. The settings are as follows:

```
!# CREATE-Z36H
!# Values:Y N Default: Y
!# Type: Text; Max Length: 01
!# tab100 of library: Yes; tab100_<server_type>: No.
!
! Y = transfer completed loan records to a history file
!
!# CREATE-Z37H
!# Values:Y N Default: Y
!# Type: Text; Max Length: 01
!# tab100 of library: Yes; tab100_<server_type>: No.
!
! Y = transfer completed hold records to a history file
```

This appears to keep the loan/hold from registering on the Items History.

The loan history will still populate for the session, so there are also **files on the local pcs** which should be cleared daily:

The **Circulation Loan history** is stored in the C:\AL500\CIRC\files\XXX50\loan.log .

The **Return history** is stored in the C:\AL500\CIRC\files\XXX50\return.log .

In addition, the **circ logger** may be disabled by changing column 2 to N in the library **tab\_circ\_log.eng** table.

A service to scrub patron ids could also be run for individual libraries. This service, “**Remove patron IDs**” (**cir-32**) will change the z35\_id (patron ID) to an "SCRnnnnnn" number. This makes the event \*not\* traceable to a particular patron but preserves it for use by the Circ statistics program.

If you wish to have this service run, please contact SDLN staff to set up a schedule for the job.
